

## Capitalize on powerful simulation

### Overview

Through the netSIM-portal our clients get browser based access to the analysis and simulation solutions specifically developed to meet their application needs. The programs powered by Maple and MapleNet are hosted on our dedicated netSIM-server together with the application data, which can be independently administered by the user .

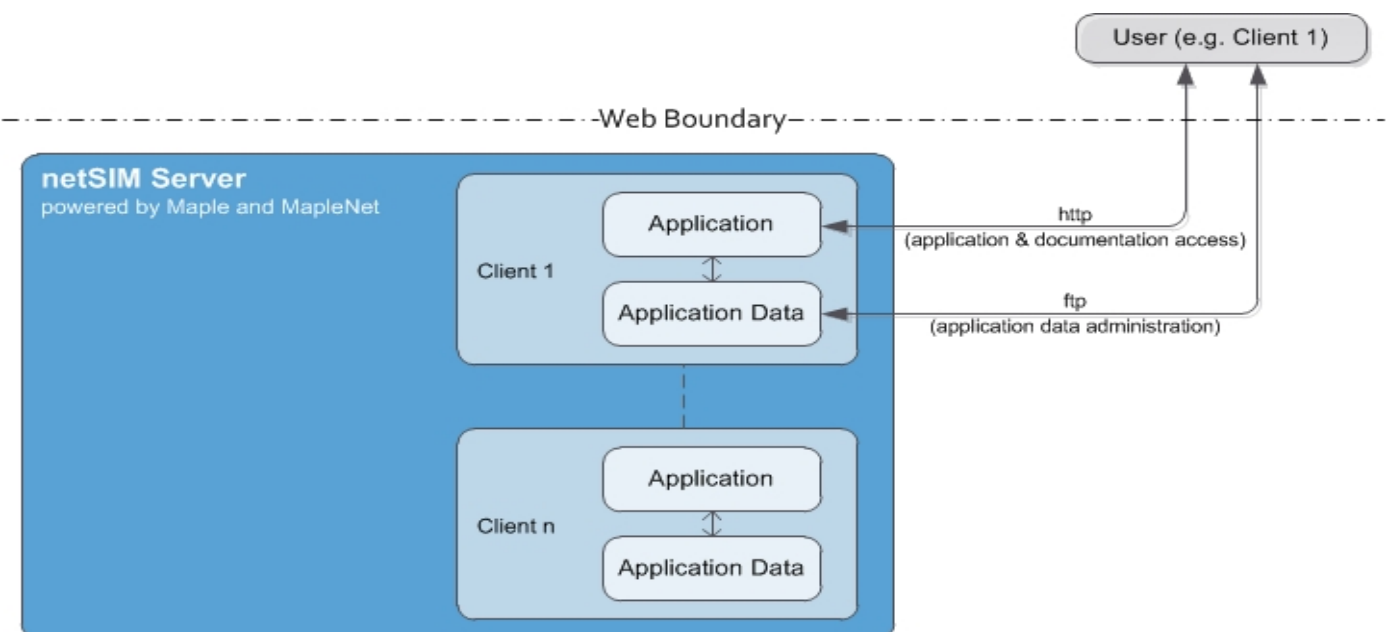

The key advantages are:

- Anywhere and anytime access to specialised and dedicated analysis algorithms and systems simulations
- No time and effort required for installing, training and maintaining specialised software
- All users, irrespective of their locations, work always with the current data sets and the latest software release

### Applications

The possible applications are numerous. Here a selection:

- Systems optimisations and what-if analysis without the need for specialised and costly software
- Use of interactive technical documentations in the systems development phase by decentralised development teams to align specifications, to select components and to optimise systems functions
- Virtual presentation of system functionalities
- On-site analysis of customer requirements
- Training
- Interactive web pages for clients with computation-intensive algorithms
- and many more

We make use of powerful analytics and simulation to provide customized services in the following areas:

- Technology Analysis and Development
- Business Analysis and Development
- Complex Problem Solving
